

# QUNET Tokenomics

Illustrative · Non-Binding · ERC-20 Utility Framework

## Important Disclaimer

This tokenomics document is illustrative and non-binding. All figures, distributions, and parameters are placeholders and subject to legal review and smart contract audit.

## Token Standard

QUNET is planned as an ERC-20 compliant token deployed on an Ethereum-compatible blockchain layer to ensure transparency, auditability, and ecosystem interoperability.

## Supply Philosophy

Total supply, minting rules, and allocation structures are intentionally not finalized at this stage in order to preserve regulatory flexibility and responsible deployment practices.

## Utility-Oriented Design

The token's conceptual utility is limited to access signaling, participation modeling, and interaction within controlled research and experimental protocol environments.

## No Financial Rights

Holding QUNET tokens does not grant equity, dividends, revenue sharing, profit expectations, or governance authority of any kind.
